ASIMO (Advanced Step in Innovative Mobility) is a humanoid robot created by Honda in 2000. It is currently displayed in the Miraikan museum in Tokyo, ¹ Japan. ASIMO has the ability to **recognize** moving objects, postures, gestures, its surrounding environment, sounds, and faces, which enables it to interact with humans. The robot can detect the movements of multiple objects by using visual information captured by two ² cameras "eyes" in its head and also determine distance and direction. This feature allows ASIMO to follow or face a person when **approached**. The robot interprets voice commands and human gestures, enabling it to recognize when a handshake is offered or when a person waves or points and then respond accordingly. ³ ASIMO's ability to distinguish between voices and other sounds allows it to identify its companions. ASIMO is able to respond to its name and ⁴ recognize sounds associated with a falling object or collision. This allows the robot to face a person when spoken to or look towards a sound. ASIMO responds to questions by nodding or providing a verbal answer in different languages and can recognize approximately ⁵ ten different faces and address them by name.
