**Part D: Read the following passage and choose the best answer**

The location of stars in the sky relative to one another do not appear to the naked eye to change, and as a result, stars are often considered to be fixed in position. Many unaware stargazers falsely assume that each star has its own pernament home in the nighttime sky.

In reality, though, stars are always moving, but because of their tremendous distances between stars themselves and from stars to earth, the changes are barely perceptible here. An example of a rather fast moving star demonstrates why this misconception prevails, it takes approximately two hundreds years for a rapid stars like Bernard's star to move a distance in the sky equal to the diameter of the earth's moon . When apparently negligible movement of the stars is constraisted with the movement of the planets, the stars are seemingly unmoving.

1. The best title for this passage is "....."
 

A. what the eye can see in the sky	B. Bernard's star
C. planetary movement	D. the ever - moving star
2. According to the passage , the word "tremendous" is closet in meaning to .....
