Environmental Conservation

Environmental conservation has never been more urgent. With over 1 million species at risk of extinction due to human activities, protecting our planet is essential. Conservation not only preserves biodiversity but also maintains vital ecosystem services like clean air, water, and fertile soil, (18)_____.

A key benefit of conservation is safeguarding biodiversity. Diverse ecosystems are more resilient, better able to withstand natural disasters, and provide resources such as medicine, food, and industrial materials. By protecting natural habitats, we ensure these resources remain available for future generations. Conservation also plays a crucial role in fighting climate change. Forests, wetlands, and oceans act as carbon sinks, which absorb CO₂, regulate global temperatures, and whose effectiveness (19)_____.

Economically, conservation can boost local economies through eco-tourism and sustainable resource management. In addition, due to the amount of pollution that modern devices release into the air, (20)_____. Individuals can contribute by reducing waste, recycling, and using energy-efficient appliances. Supporting conservation organizations and advocating for environmental policies are also impactful. (21)_____.

In conclusion, conservation is a shared responsibility. (22)_____. When individuals, communities, and governments work together, we can protect natural resources, reduce pollution, and preserve biodiversity. Small daily actions, such as recycling, conserving water, and reducing plastic use, contribute to a healthier environment.

The Differences Between American and Chinese Humanoid Robots

Humanoid robots are gaining importance in today's world, especially in the United States and China. However, these two countries approach their development differently. In the United States, companies focus heavily on **advanced** artificial intelligence (AI). They want robots to think and act independently. For example, Boston Dynamics created Atlas, a robot that can jump, run, and even do backflips. This shows how **American engineers prioritize flexibility and smart software**, making their robots adaptable to challenging tasks.

In contrast, Chinese developers often concentrate on building strong and reliable hardware. Their robots are designed with precise movements and durable materials. A good example is UBTECH's Walker, which can perform **practical tasks** like carrying objects or helping at home. Because of this focus, Chinese robots are affordable and useful in everyday life, particularly in homes or factories.

Funding also differs between the two nations. In the US, private companies and investors provide money for robotics projects. This encourages new ideas, but it can be risky if funding stops. On the other hand, China's government supports its robotics industry with steady resources. While this ensures progress, it may limit creative breakthroughs compared to the American approach.

The uses of humanoid robots reflect these priorities. American robots often appear in research labs, entertainment, or healthcare, assisting people like elderly patients. Meanwhile, Chinese robots are more common in manufacturing and service industries, where their strength and accuracy are valuable.

Despite their differences, both countries contribute greatly to robotics. The US leads in AI innovation, while China excels in practical production. In the future, these strengths might combine. If American robots improve their hardware and Chinese robots enhance their AI, a new era of advanced humanoid robots could begin, benefiting people worldwide.

Question 23: Which of the following is NOT mentioned as a characteristic of Chinese humanoid robots?

- A.** Very precise movements **B.** Strong durable materials
C. Really expensive cost **D.** Quite affordable pricing

Question 24: The word **its** in paragraph 3 refers to _____.

- A.** America **B.** progress **C.** industry **D.** China

Question 25: The word **advanced** in paragraph 2 is OPPOSITE in meaning to _____.

- A.** very basic **B.** highly complex **C.** quite modern **D.** really sophisticated

Question 26: The word **practical tasks** in paragraph 3 is OPPOSITE in meaning to _____.

- A.** useful daily jobs **B.** easy simple actions
C. academic operations **D.** real-life missions

Question 27: Which of the following best paraphrases the underlined sentence in paragraph 4?

- A.** US experts value adaptability and clever coding highly.
B. American teams prefer sturdy and reliable hardware always.
C. US firms focus on tough and precise robots only.
D. American tech stresses cheap and practical designs daily.

Question 28: According to the passage, which of the following is NOT true?

- A.** American robots emphasize advanced AI heavily.
B. Chinese robots support practical tasks daily.

- C. Chinese robots serve mainly used by scientists.
D. American robots handle complex movements well.

Question 29: In which part of the text does the author mention the effect of funding on robotics?

- A. Paragraph 1 B. Paragraph 2 C. Paragraph 3 D. Paragraph 4

Question 30: In which part of the text does the author mainly discuss the applications of humanoid robots?

- A. Paragraph 1 B. Paragraph 2 C. Paragraph 3 D. Paragraph 4

Read the following passage about powering and mark the letter A, B, C or D on your answer sheet to indicate the best answer to each of the following questions from 31 to 40.

The Rise of Studying Abroad Among Vietnamese Students

[I] In recent years, studying abroad has become increasingly popular among Vietnamese students. [II] Many believe that universities in countries like the United States, the United Kingdom, and Australia provide higher quality education than those in Vietnam. [III] Students want to learn advanced skills and knowledge that are hard to find at home. Additionally, studying in English-speaking countries allows them to improve their English, a skill highly valued by employers worldwide. [IV]

Another benefit of studying abroad is cultural exposure. By living in a foreign country, students encounter different traditions and lifestyles. This broadens their perspectives and helps them understand the world better. For example, a student in Canada might learn to adapt to cold weather and diverse communities, which builds independence. Moreover, an international degree often impresses employers. It can lead to better jobs and higher salaries, both in Vietnam and overseas.

However, studying abroad comes with challenges. Language barriers make it difficult for some students to communicate or follow lessons. Cultural differences can also cause confusion or discomfort. Besides, the cost is a major concern. Tuition fees, travel, and living expenses are expensive, so students often depend on scholarships or loans. Homesickness is another issue, as being far from family can feel lonely.

Despite these difficulties, many Vietnamese students see studying abroad as a worthwhile investment. It not only improves their education and skills but also shapes their future. The trend also pushes Vietnam to improve its own universities to keep talented students at home. For now, the advantages often outweigh the challenges, making this a popular choice.
