Reading the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the best answer to each of the following questions from 23 to 30.

In the southeastern Pacific Ocean, on the piece of land known as Easter Island (now a territory of Chile), stand several hundred massive stone monoliths. These carvings, called "moai," are recognizable by their oversized heads, heavy brows, long noses, elongated ears, and protruding lips. While **they** average four meters in height and 12.5 tonnes, the largest is almost 10 meters tall, and the heaviest weighs 86 tons. The upright sculptures are scattered around Easter Island, many installed on platforms called "ahu" along the coast, while others are more inland, and several stand near the main volcanic quarry of Rano Raraku.

The Rapa Nui people of the island built a total of 887 of these <u>impressive</u> statues between the 12th and 16th centuries. They were, it is said, symbols of religious and political authority, embodiments of powerful chiefs or ancestors who faced inland toward the island's villages, perhaps watching over their creators, keeping them safe.

While the very creation of such monoliths—most out of volcanic ash with stone hand chisels—is an impressive feat, what is more remarkable (not to mention mysterious) is how they were transported to their resting places.

In the past, most researchers associated the building and transportation of the moai with widespread deforestation on the island and the eventual collapse of the Rapa Nui civilization. This hypothesis is based, in part, on the fact that the pollen record suddenly disappeared at the same time as the Rapa Nui people stopped constructing the moai and transporting them with the help of wooden logs. How exactly would logs <u>facilitate</u> the movement of the statues? Most proponents of this method believe that the people created "rollers" by arranging parallel logs on which the prone statues were pulled or pushed. They would not have required an entire roadway of logs since logs from the back could be placed at the front, creating a moving platform of sorts. To make it easier to roll, and keep in position, the statue would be placed on two logs arranged in a V shape.
