Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the best answer to each of the following questions from 23 to 30.

Climate change is a pressing global crisis impacting every nation, as seen in events like wildfires in Canada and floods in Pakistan. Because greenhouse gas emissions have worldwide effects, such as rising temperatures and extreme weather, no country can tackle this issue on its own. The interconnected nature of our atmosphere, oceans, and ecosystems means that challenges like melting glaciers and intensified storms are global, making international cooperation absolutely essential.

Collaboration is particularly **crucial** for vulnerable nations. Despite contributing only a small fraction to global emissions, regions like Africa face severe consequences, such as floods and droughts. These countries need international support to build resilience and adapt to climate change impacts. Without global partnerships, efforts to address climate change would be fragmented and far less effective.

The Paris Agreement exemplifies the power of global collaboration. Adopted in 2015, **it** aims to limit global

warming to below 2°C and involves both developed and developing nations. This inclusivity is key, as it acknowledges that while some countries have contributed more to emissions, everyone must participate in the solution. The agreement fosters cross-border collaboration through technology sharing, financial aid, and coordinated strategies.

Isolationism is counterproductive in the climate battle. The interconnected nature of climate and global trade systems shows that no nation can solve this alone. The largest emitters, like China and the United States, need to work together. Moreover, developing countries require technology transfers and financial assistance to transition to low-carbon economies. Isolationist policies undermine this by making climate solutions costlier and harder to implement.

International frameworks also provide economic benefits, like job creation through green technology. Initiatives like the Breakthrough Agenda, launched at COP26, aim to make clean technologies affordable and accessible. This collaboration accelerates the global transition to net-zero, benefiting all nations and ensuring that advancements in renewable energy and climate adaptation are shared widely and effectively. Thus, a **unified** global response remains essential for safeguarding our planet's future.
