Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the correct answer to each of the following questions from 31 to 36.

The term “artificial intelligence” (AI) refers to the ability of machines to mimic human-like intelligence. It involves programming computers to perform tasks that typically require human cognition, such as understanding language, making decisions, and recognizing patterns. AI is rapidly transforming various industries, from healthcare to transportation. For example, AI-powered systems are used to diagnose diseases, while self-driving cars are being developed to revolutionize transportation.

While AI offers immense potential, there are concerns about its negative impact on jobs and privacy. Some fear that automation might replace human workers in many sectors, and others are concerned about how AI systems might exploit personal data. However, experts agree that with the right regulations, AI can be used for good, benefiting society as a whole. As AI continues to evolve, it is expected that it will create new ways to solve problems and improve the quality of life.
