Line	RAIN MAKING
1	When it rains, it doesn't always pour. During a typical storm, a comparatively
2	small amount of the locked-up moisture in each cloud reaches the ground like
3	rain. So the idea that human intervention in a rain dance, perhaps - might
4	encourage the sky to give up a little additional water has been around in
5	prehistoric times. More recently, would-be rain-makers have attempted direct
6	intervention, by lobbing various chemicals out of aeroplanes in the effort to wring
7	more rain from the clouds, a practice known as 'cloud seeding'.
8	Yet such techniques, which were first developed in the 1940s, are notoriously
9	difficult to evaluate. It is hard to ascertain, for example, how much rain would
10	have fallen anyway. So, though much anecdotal evidence of the advantages of
11	cloud seeding, which has led to its adoption in more than 40 countries around the
12	world, as far as scientists are concerned, results are still inconclusive. That could
13	be about to changing. For the past three years researchers have been carrying out
14	the most extensive and rigorous evaluation of a revolutionary technique which
15	will substantial boost the volume of rainfall.

SECTION III: READING (5.0 pts)

Environmentalists often fear that tourists will trample all over sensitive natural resource areas, but tourism may bring the needed and only economic incentives to help drive conservation, said Bynum Boley. Ecotourism and natural resource conservation already have a mutually beneficial relationship that is ideal for creating a sustainable partnership.

"Ecotourism destinations benefit in the form of enhanced tourism competitiveness from the protection of quality natural resources," he said. "Meanwhile, the conservation of these natural resources is increasingly valued since these **pristine** natural resources are the foundation of the ecotourism industry and the driver of all economic benefits associated with ecotourism."

Tourism is a \$7.6 trillion global industry, provides 277 million jobs and is a primary income source for 20 of the world's 48 least-developed countries. It also subsidizes environmental protection and helps protect, conserve and value cultural resources that might otherwise be undervalued by the host community, Boley said. In the newspaper, Boley and co-author Gary Green said that despite past tension between the tourism industry and environmentalists, the two should team up as allies to fight off increasing conversion of land away from its natural state, ecotourists not only provide a boost to the economy in such places, they can also motivate landowners into keeping the environment in its natural state instead of converting it into something unsustainable. They could also influence the public **perception** of conservation, Boley explained, which does not often favor environmental protection.

"The public has become increasingly less prone to respond to environmental messages," he said. "**Economic messages are needed in order to attract the public's interest.**" Too often, Boley and Green said, unique natural resource areas are converted into urban, suburban and agricultural developments without considering their ecotourism potential. In addition to the lost ecotourism revenue, there are a host of negative environmental consequences such as biodiversity loss, water and food shortages and the land being unable to mitigate the effects of climate change. These areas are not valued for their unique attributes or the valuable natural resources they provide, Green said, "so we lose them." Tourists have historically been seen as having a negative impact on the environment. Critics complain that **they** violate fragile and threatened natural environments while contributing to greenhouse gases from the increased number of flights to these exotic and often remote locales. While these criticisms are justified, Boley and Green said responsible programs promote education of ecological conservation and environmental sustainability, fostering a greater understanding and appreciation of these exotic areas.

Many of the things we do depend on receiving information from other people. Catching a train, making a phone call and going to the cinema all involve information (58)_____ is stored, processed and communicated. In the past, most information used to be kept on paper in the (59) _____ of, for example, books, newspapers and timetables. Now more and more information is put on computers.

Computers play a (60) _____ in our everyday lives, sometimes without us even realizing it. Consider the use of computers in (61) _____ shops and offices. Big shops, especially chain stores with branches all over the world, have to deal with every large (62) _____ of information. They have to make (63) _____ there are enough goods on the shelves for customers to buy; they need to be able to re-order before stocks (64) _____ out, to decide which things are selling well and so on. (65) _____ these processes are performed quickly and efficiently by computers.

All in the mind

Memory isn't like a muscle, something specific you can exercise. It's a way of organising information in your brain. So (66) _____, you need to change and reorganise the way you think and this will help to support how your memory works.

Short-term memory is limited, and (67) _____ about seven items (numbers, names, objects, etc.) at a time. So when given a string of numbers to remember such as 123957001969, break it into chunks: 12 39 57 00 19 69 or even 1239 5700 1969. These will be easier to memorise than individual digits (68) _____. The chunks will be even more memorable if you can attach a meaning to some or all of them. For example, you might be able to link them to the age of someone you know, an address or a famous date (e.g. 1969, the first moon landing). These linked meanings can then form a story to help remember a really long sequence.

Another (69) _____ information relies on images. A classic way of remembering a person's name is to try and imagine it (or something associated to it) on the person's face. For less obvious names, (70) _____. Psychologists have found that the more unusual and vivid the image is, the better it works.

- | | |
|------------------------------------|-------------------------------------|
| A. because there are fewer of them | D. you'll have to get more creative |
| B. technique for memorizing | E. to improve your memory |
| C. fondness for meaning | F. most people can only remember |
